

## Violet Red Bile Glucose Agar w/o Lactose, Granulated

**GM581**

Violet Red Bile Glucose Agar w/o Lactose, granulated is used for detection and enumeration of *Enterobacteriaceae* in raw foods and clinical samples.

### Composition\*\*

Ingredients	Gms / Litre
Peptic digest of animal tissue	7.000
Yeast extract	3.000
Sodium chloride	5.000
Bile salts mixture	1.500
Glucose	10.000
Neutral red	0.030
Crystal violet	0.002
Agar	12.000
Final pH ( at 25°C)	7.4±0.2

\*\*Formula adjusted, standardized to suit performance parameters

### Directions

Suspend 38.53 grams in 1000 ml distilled water. Heat to boiling to dissolve the medium completely. DO NOT AUTOCLAVE. Cool to 45-50°C. Mix well and pour into sterile Petri plates.

### Principle And Interpretation

Violet Red Bile Agar, a modification of MacConkeys original formulation (1) is used for the enumeration of coli-aerogens bacterial group.

Violet Red Bile Glucose Agar w/o Lactose, a modification of VRBA (M049), was designed for the enumeration of *Enterobacteriaceae* (2). It employs the selective inhibitory components crystals violet and bile salts and the indicator system glucose and neutral red. Sought bacteria will dissimilate glucose and produce purple zones around the colonies (3). ISO committee has also recommended this medium (4). Selectivity of VRBGA can be increased by incubation under anaerobic conditions and/ or at elevated temperature, i.e. equal to or above 42°C (5-7).

Peptic digest of animal tissue and yeast extract serve as sources of carbon, nitrogen, vitamins and other essential growth nutrients. Glucose is the fermentable carbohydrate, utilization of which leads to the production of acids. Neutral red indicator detects the acidity so formed. Crystal violet and bile salts mixture help to inhibit the accompanying gram-positive and unrelated flora. Sodium chloride maintains the osmotic equilibrium. Further biochemical tests are necessary for positive identification (8).

### Quality Control

#### Appearance

Light yellow to pinkish beige coloured granular medium

#### Gelling

Firm, comparable with 1.2% Agar gel.

#### Colour and Clarity of prepared medium

Reddish purple coloured clear to slightly opalescent gel forms in Petri plates.

#### Reaction

#### pH

7.20-7.60

#### Cultural Response

Cultural characteristics was observed after an incubation at 35-37°C for 18-24 hours. Recovery rate is considered as 100% for bacteria growth on Soyabean Casein Digest Agar.

#### Cultural Response

Organism	Inoculum (CFU)	Growth	Recovery	Colour of colony	Incubation temperature
<i>Escherichia coli</i> ATCC 8739	50 -100	luxuriant	≥50 %	pink-red with bile precipitate	18 -24 hrs
<i>Pseudomonas aeruginosa</i> ATCC 9027	50 -100	luxuriant	≥50 %	pink to red	18 -24 hrs
<i>Escherichia coli</i> NCTC 9002	50 -100	good-luxuriant	≥50 %	pink-red with bile precipitate	18 -24 hrs
<i>Escherichia coli</i> ATCC 25922	50 -100	good-luxuriant	≥50 %	pink-red with bile precipitate	18 -24 hrs
<i>Salmonella</i> Enteritidis ATCC 13076	50 -100	good-luxuriant	≥50 %	light pink	18 -24 hrs
<i>Enterobacter aerogenes</i> ATCC 13048	50 -100	good-luxuriant	≥50 %	pink-red	18 -24 hrs
<i>Staphylococcus aureus</i> ATCC 25923	≥10 <sup>3</sup>	inhibited	0%		≥24 hrs
<i>Staphylococcus aureus</i> ATCC 6538	≥10 <sup>3</sup>	inhibited	0%		≥24 hrs

## Storage and Shelf Life

Store below 30°C in tightly closed container and the prepared medium at 2-8°C. Use before expiry date on the label.
