

Lethen Broth, Modified

LQ131D

For determination of bacterial activity of quaternary ammonium compounds using *Escherichia coli* or *Staphylococcus aureus*.

Composition**

Ingredients	Gms / Litre
Peptic digest of animal tissue	20.000
Casein enzymic hydrolysate	5.000
Beef extract	5.000
Yeast extract	2.000
Sodium chloride	5.000
Sodium bisulphite	0.100
Lecithin	0.700
Polysorbate 80	5.000

**Formula adjusted, standardized to suit performance parameters

Directions

Label the ready to use LQ131D bottle. Inoculate the sample and incubate at specified temperature and time.

Principle And Interpretation

In the early 40s, Weber and Black recommended the use of lecithin and polysorbates to neutralize the antimicrobial action of the quaternary ammonium compounds (5). In 1965, the methodology was accepted by AOAC for the antimicrobial assays and extended their use to all the cationic detergents. In 1978, the FDA incorporated it as pre-enrichment medium for every microbial examination of cosmetics. Lethen Broth, Modified is prepared as per FDA (1) for screening cosmetic products for microbial contamination. There are great chances of altering the chemical composition of cosmetics by the metabolism of organisms thereby spoiling and causing harm to the users (2, 3, 4). Direct colony counts and enrichment culturing are the methods of choice for isolating microorganisms from cosmetic products. The word Lethen represents a combination of lecithin and polysorbate (tween) 80. Peptic digest of animal tissue, casein enzymic hydrolysate, beef extract and yeast extract provide nitrogenous nutrients, carbon compounds and trace elements to the microorganisms. Incorporation of lecithin and polysorbate 80 to the medium enables the recovery of bacteria from materials containing residues of disinfectant compounds or preservatives used in cosmetics. Polysorbate 80 is added to nullify phenolic compounds, hexachlorophene, formalin and along with lecithin neutralizes ethyl alcohol (6). Lecithin also neutralizes quaternary ammonium compounds present in the cosmetics. Sodium chloride maintains the osmotic balance of the medium. Enrichment in this medium should be done for 7 days at 30-32°C and then subcultured on Lethen Agar, Modified (M946) and/or MacConkey Agar (M081).

Quality Control

Appearance

Sterile clear Lethen broth modified in glass bottle.

Colour

Light yellow coloured clear solution

Quantity of Medium

500 ml of medium in glass bottle.

Reaction

6.80- 7.20

Sterility test

Passes release criteria

Cultural response

Cultural characteristics was observed after incubation at 35-37°C for 18-48 hours.

Organism	Growth	Inoculum (CFU)
<i>Escherichia coli</i> ATCC 25922	luxuriant	50-100
<i>Staphylococcus aureus</i> ATCC 25923	luxuriant	50-100
<i>Staphylococcus aureus</i> ATCC 6538	good-luxuriant	50-100

Storage and Shelf Life

Store between 2-8°C. Use before expiry date on the label.
