Antibiotic Assay Medium C

ME555

Antibiotic Assay Medium C is used as the broth medium in turbidimetric assay of a wide variety of antibiotics in accordance with European Pharmacopoeia .

Composition**

Ingredients	Gms / Litre
Peptone	6.000
Beef extract	1.500
Yeast extract	3.000
Sodium chloride	3.500
Glucose monohydrate	1.000
Dipotassium hydrogen phosphate	3.680
Potassium dihydrogen phosphate	1.320
pH after sterilization	*7.0±0.1

**Formula adjusted, standardized to suit performance parameters

*While assaying Josamycin & Josamycin sulphate adjust the pH to 8.0 ±0.1

Directions

Suspend 19.9 grams of dehydrated media in 1000 ml R-water/ purified /distilled water. Heat if necessary to dissolve the medium completely. Sterilize by autoclaving at 15 lbs pressure (121°C) for 15 minutes.Adjust the pH of the medium, using freshly prepared buffer solution as recommended by the European pharmacopoeia for the antibiotic assayed.

Advice : Recommended for the microbiological assay of Colistimethate sodium, Dihydrostreptomycin sulphate, Erythromycin estolate, Framycetin sulphate, Gentamicin sulphate, Gramicidin, Kanamycin acid sulphate ,Kanamycin monosulphate, Neomycin sulphate,Rifamycin sodium ,Spiramycin, Streptomycin sulphate,Tylosin, Tylosin tartarate, Tyrothricin and Vancomycin hydrochloride .

Principle And Interpretation

This medium is used in turbidimetic assay of several antibiotics. The composition of the medium is in accordance to the specifications detailed in the European Pharmacopoeia (1). Turbidimetric methods for determining the potency of antibiotics are inherently more accurate and more precise than comparable agar diffusion procedures (2) .

Peptone, beef extract and yeast extract provide essential nutrients and growth factors for enhanced microbial growth. Sodium chloride maintains the osmotic equilibrium while phosphates are incorporated in the medium to provide good buffering action. Glucose monohydrate serves as the carbon and energy source for faster growth.

Turbidimetric antibiotic assay is based on the change or inhibition of growth of a test microorganims in a liquid medium containing a uniform concentration of an antibiotic (3). Use of this method is appropriate only when test samples are clear .

Quality Control

Appearance
Cream to yellow homogeneous free flowing powder

Colour and Clarity of prepared medium
Light yellow coloured clear solution without any precipitate

pH
6.90-7.10

Cultural Response
ME555: Cultural characteristics observed after an incubation at 35-37°C for 18-24 hours .

Organism	Inoculum (CFU)	Growth	Serial dilution with
Escherichia coli ATCC 9637	50-100	luxuriant	Colistimethate sodium
Escherichia coli ATCC 10536	50-100	luxuriant	Rifamycin sodium
Enterococcus hirae ATCC 10541	50-100	luxuriant	Gramicidin, Tyrothricin
Klebsiella pneumoniae ATCC 10031	50-100	luxuriant	Streptomycin sulphate
Staphylococcus aureus ATCC 6538p	50-100	luxuriant	Framycetin sulphate, Genatamicin sulphate, Gramicidin, Kanamycin monosulphate, Kanamycin acid sulphate, Neomycin sulphate, Spiramycin; For Josamycin & Josamycin propionate- adjust the pH of the medium to 8.0 ± 0.1, For Vancomycin hydrochloride incubate at 35-37°C.
Staphylococcus aureus ATCC 9144	50-100	luxuriant	Tylosin, Tylosin tartarate

Storage and Shelf Life

Store below 30°C in tightly closed container and use freshly prepared medium . Use before expiry date on the label.
