

Semisporulation Growth Agar

G044

Semisporulation Growth Agar is used for the growth and sporulation of *Saccharomyces cerevisiae*.

Composition** :

Ingredients	Grams/Litre
Potassium acetate	2.00
Dextrose	1.00
Yeast extract	2.50
Agar	15.00

** Formula adjusted, standardized to suit performance parameters

Directions :

Suspend 20.5 grams in 1000 ml distilled water. Heat to boiling to dissolve the medium completely. Sterilize by autoclaving at 15 lbs pressure (121°C) for 15 minutes. Mix well and dispense as desired.

Principle and Interpretation :

Semisporulation Growth Agar is used for the growth and sporulation of *Saccharomyces cerevisiae*. *Saccharomyces cerevisiae* is a unicellular eukaryote that has become an important tool in microbial genetic techniques. It undergoes meiosis and sporulation which takes place in a single cell. Potassium acetate enhances the sporulation of diploid strains. This medium contains agar as the solidifying agent.

Quality Control :

Appearance of Powder :

Light yellow coloured, homogeneous, free flowing powder.

Gelling :

Firm, comparable with 1.5% Agar gel.

Colour and Clarity :

Light yellow coloured, clear to slightly opalescent gel forms in Petri plates.

Cultural Response :

Cultural characteristics observed after an incubation at 35-37°C for 18 - 48 hours.

Please refer disclaimer Overleaf

Organisms (ATCC)
Saccharomyces cerevisiae ATCC9763

Growth
good-luxuriant

Storage and Shelf-life :

Store below 30°C and the prepared medium at 2 - 8°C. Use before expiry date on the label.
