

HiEnviro-Sponge™ Dry, sterile

PW1370

Intended use :

Recommended for microbiological sample collection from environmental surfaces.

Content :

Sterile HiEnviro-Sponge™ (Dry Cellulose sponge) in wired sampling bag

Directions :

1. A white printed area has been provided to label the sample.
2. Tear the bag along the tear-line and pull the tabs to open the bag; add a suitable sterile media/buffer solution to hydrate the sponge.
3. Guide the sponge out of the bag without touching the bag's internal surface (wearing sterile hand gloves is mandatory while getting the sponge out).
4. Swab the surface ensuring that the entire sponge is in contact with the surface of the collection site.
5. Place the sponge back in the bag.
6. Roll the top opening of the sampling bag by holding the tapped wires. Seal the bag by folding the tapped wires at both ends.

Quality control :

Appearance

Sterile HiEnviro-Sponge™ (Dry Cellulose sponge) in wired sampling bag

Dose of Irradiation (kGy)

> 25 kGy

Sterility check

Aseptically open the sampling bag containing the sponge. Add 100ml Sterile Soyabean Casein Digest Medium (LQ027) in bag and incubate at 30-35°C for 14 days. Check the bag for turbidity.

Biocide activity of sponge

Not detected
